Profile

David is a web application developer known for his uncompromising standards on performance, security, and design quality. He approaches his work with new media sensibilities gleaned from his 12 years of experience in graphic design, print production, and photography. He is an avid participant in the global open source community.

Experience

Founding Developer, Watershed Portals; 2002-Present

Watershed Portals is an open source digital library and collaboration system for watershed management, publicly licensed under the GPL. Users can browse and search for information about projects, organizations, people, and events as well as resources such as documents, maps, photos, data sets and more. All of this content can be updated through-the-web without content managers and participants needing to know anything about XHTML or database programming.

Director of Information Technology, Wind Harvest; 2001-present

David serves this wind energy company by providing comprehensive technology solutions including web and print publishing services, computational assistance, network and infrastructure solutions. He is also involved in the company's strategic planning and market/policy analysis.

Web Application Developer, California Water Policy Conference; 2001-present

This annual conference selected David to develop their content management system and secure online registration services. The content management system allows the conference organizers to make through-the-web updates to the workshops descriptions and discussion panels.

Developer/Author, Zope Community; 2002-present

David is a daily participant in the Zope and Plone developer communities. He is the current editor and maintainer of the DTML (Document Template Markup Language) Reference Manual. He can often be found on the Zope and Plone listservs helping others and asking questions of his own.

Education

University of California, Davis, CA - Economics B.A. Graduated 2003
